Employment

State Street Bank Boston, Massachusetts — June 2024 - Present
Software Engineering & Development Officer
Development Lead

- Contributed to core development, onboarded new hires, wrote and refined stories, provided technical subject matter expertise
- Designed, implemented and deployed enhancements to microservices that process and transform messages from client files
- Provided technical knowledge to a team of writers to assist in the creation of handbook-style documentation for internal tools
- Worked as a delivery manager to support vendors in the design of an eventing model as an audit trail for application runtime that provides statistics and reporting using an Elastic Stack
- Took ownership of a team of developers to support migrations of existing services to new infrastructure (Azure Kubernetes)
- Follow Agile and Kanban best practices to act as delivery manager for migration and dashboarding tasks

Travelers Hartford, Connecticut — July 2020-March 2024
Software Engineer

- Collaborated with UX and business teams to design and strategically implement customer-facing React pages, enhancing user experience and driving business growth and resulting in 15% faster sessions for users
- Engineered robust Node APIs to streamline business functions, and transpose customer input to match consumable schemas, enhancing data consistency and improving loading times by over two seconds on required pages
- Spearheaded the migration of on-premise applications to AWS Cloud, enhancing scalability, reducing operational costs in terms of memory usage by 400 MB during high traffic periods
- Implemented comprehensive unit, integration, and regression tests to prove application stability, functionality, and modularity to achieve over 90% code coverage
- Undertake ownership of codebase by building Google Analytic dashboards to measure event-driven user statistics validating 20% improved success rates across user sessions
- Ensure product health via on-call responsibilities and handling support tickets elapsing 16% of any given year
- Follow Agile practices, participate in scrum readouts, planning, refinements, retros

Internships

GoldenTree Asset Management New York, New York — June 2018-August 2018
2018 IT Intern

- Modified Windows Powershell scripts to automate communication between systems and employees using Outlook
- Created Powershell scripts to maintain and update SQL databases with new holdings and trade information
- Tested accounting software according to vendor requirements saving a month in developer time

Education

State University of New York Oswego Oswego, NY — August, 2019
Bachelors in Computer Science with a Minor in Economics

Personal Projects

- Write AWS lambda functions utilizing SES to notify consumers of end-of-day trading data points
- Created a self-driving, memoized car simulation using neural networks and genetic algorithms to avoid collisions

Technologies

- Javascript (Express, React, Node)
- Java 17 (Spring Boot)
- Database integration (PostgreSQL, DB2, Mongo)
- Deployment software (Azure Devops, CB Jenkins)

Trainings

- Introduction to Lean Agility
- Machine Learning I - Basic Machine Learning
- AWS Cloud Practitioner Essentials
- Generative AI in the Workplace
